# MisterKeep *App*

Build an app for keeping things (reference app "google keep")

Build the root component: <mister-keep>

Render a list of components, use dynamic components to show different types of notes:

- note-txt
- note-img
- note-todos
- note-audio: bonus
- note-map: bonus

Support the following features:

- Full CRUD
- Note background color
- Search Notes
- Pin a note to the top pf the list
